Healthy Soil • Strong Roots • Rich Crop

Naati Plus - for soil nutrition
ENRICHED VERMICOMPOST
Naati Pro – for plant nutrition
BIOLOGICAL NUTRITION ASSISTANT

Naati
Organics

About Naati Organics

Naati Organics believes healthy crops begin with healthy soil. Our mission is to help farmers build productive soils, stronger roots and better harvests through balanced crop nutrition and sustainable farming practices.

About this Handbook

This booklet explains the fundamentals of soil health, root development and balanced plant nutrition in simple language before introducing the Naati Complete Crop Nutrition System. It is designed to help farmers understand why healthy soil is the foundation of profitable farming.

Publisher's Note

Our objective is not simply to sell a product, but to help farmers understand the science behind healthy soils and healthier crops. When farmers understand the 'why', choosing the right nutrition becomes a confident decision.

Naati
Organics

Why Are Our Soils Becoming Weaker?

Healthy crops do not begin with fertilizers—they begin with healthy soil.

For generations, our soils naturally supplied nutrients to crops. Today, many farmers are noticing lower yields, greater dependence on fertilizers and declining soil productivity. The problem is not that the land has stopped producing; it is that the soil has gradually lost its strength. When organic matter decreases, beneficial microorganisms reduce, and the soil becomes compact, roots struggle to grow and plants cannot efficiently absorb nutrients and water.

Why is this happening?

01 — Continuous cultivation without replenishing organic matter.

02 — Removal or burning of crop residues.

03 — Reduced soil biological activity.

04 — Compacted soil due to repeated field operations.

05 — Imbalanced nutrition that focuses on only a few nutrients.

Naati
Organics

Symptoms	Impact on the Crop
Hard, compact soil	Poor root growth
Water stagnation or rapid drying	Moisture stress
Low earthworm activity	Reduced biological life
Yellowing or weak plants	Poor nutrient uptake
Declining yields	Reduced profitability

The Good News

Soil is a living system that can be restored. By rebuilding organic matter, encouraging soil biology and providing balanced crop nutrition, farmers can gradually improve root health, nutrient efficiency and crop performance. This is the philosophy behind the Naati Complete Crop Nutrition System.

Did You Know?

It takes hundreds of years for nature to form a few centimetres of fertile topsoil, but poor management can damage it in just a few seasons.

Farmer's Tip

Don't judge your soil only by its colour. Healthy soil should be loose, well-aerated, rich in organic matter and full of biological activity.

Remember

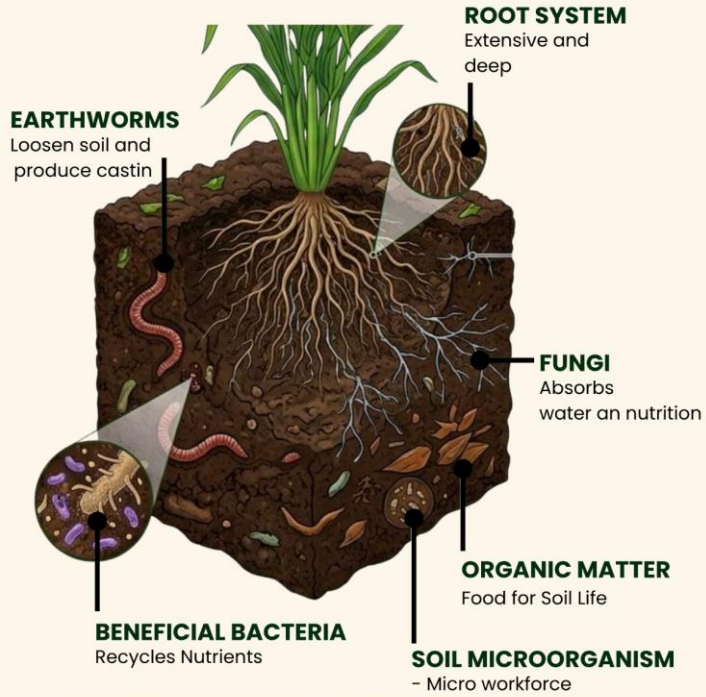

Healthy soil is not an expense—it is your farm's greatest long-term investment.

Naati
Organics

Soil is Alive – The Invisible Workforce Beneath Your Feet

At first glance, soil may appear to be nothing more than dirt. In reality, healthy soil is a living ecosystem. Millions of beneficial bacteria, fungi, earthworms and other tiny organisms work continuously beneath the surface. They break down organic matter, recycle nutrients, improve soil structure and help roots absorb water and nutrition. When this underground life is healthy, crops become healthier too.

Naati
Organics

Why is this happening?

- Organic matter reduces.
- Soil becomes hard and compact.
- Roots struggle to grow deeper.
- Nutrients remain unavailable to plants.
- More fertilizer is needed to produce the same yield.

Why is this happening?

Return organic matter to the soil, avoid unnecessary residue burning, maintain adequate moisture, reduce excessive soil disturbance and use balanced crop nutrition. Healthy soil biology develops gradually and rewards the farmer with stronger roots and more resilient crops.

Did You Know?

A single teaspoon of healthy soil can contain billions of beneficial microorganisms working around the clock.

Farmer's Tip

Earthworms are one of the simplest indicators of a healthy soil. If you regularly find them in your field, your soil biology is usually improving.

Remember

Feed the soil first, and the soil will feed your crop.

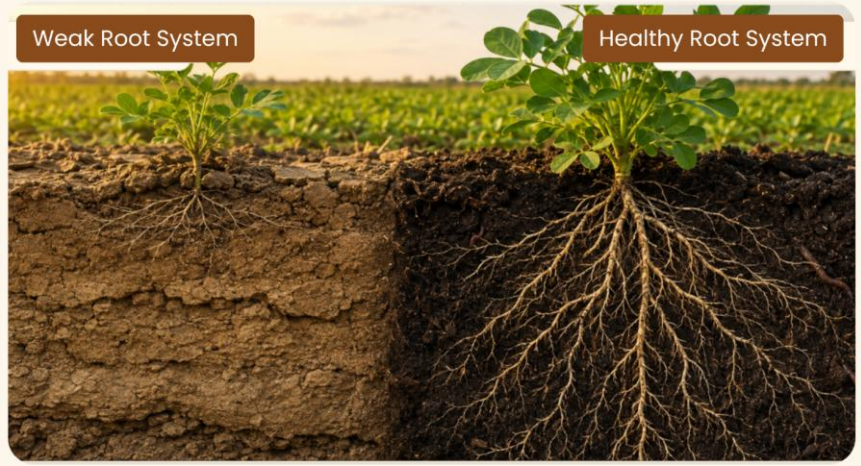

Part - 03

Naati
Organics

Healthy Soil Creates Healthy Roots

The health of every crop begins below the ground. Strong roots are responsible for absorbing water, nutrients and oxygen from the soil. When roots are healthy, plants grow faster, withstand stress better and produce higher yields. Healthy roots can only develop in healthy, well-structured soil.

What Prevents Good Root Growth?

- Compacted and hard soil
- Low organic matter
- Poor soil aeration
- Waterlogging or prolonged drought
- Imbalanced crop nutrition

Naati
Organics

Why Healthy Roots Matter

Healthy Roots	Benefits to the Farmer
Grow deeper into the soil	Access more water during dry periods
Absorb nutrients efficiently	Better fertilizer utilization
Support stronger plants	Reduced lodging and healthier growth
Develop more feeder roots	Improved flowering and fruiting
Recover faster from stress	Better resilience during adverse conditions

Why Healthy Roots Matter

Weak Root System	Healthy Root System
Shallow roots	Deep, extensive roots
Low nutrient uptake	Efficient nutrient absorption
Frequent water stress	Better drought tolerance
Weak crop growth	Vigorous crop growth
Lower yields	Higher productivity

Naati
Organics

Healthy Roots = Healthy Harvest

A healthy root system acts like the engine of the plant. Even if fertilizers are applied, weak roots cannot efficiently absorb nutrients. Building healthy soil and supporting root development are therefore the first steps towards sustainable crop productivity.

Farmer's Tip

Don't judge a crop only by what you see above the ground. Occasionally examine the roots. Healthy white feeder roots are a good sign that your soil is supporting the crop well.

Remember

Healthy roots are the bridge between healthy soil and a healthy harvest.

Naati
Organics

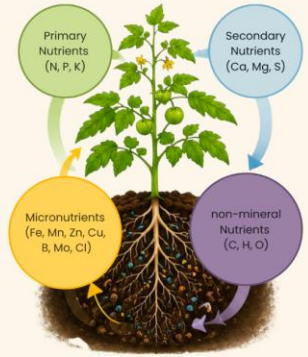

Complete Plant Nutrition – Why Every Nutrient Matters

Just as humans need a balanced diet to stay healthy, plants need balanced nutrition at every stage of their life. Providing just a couple of nutrients is not enough. Each nutrient has its own job. A deficiency of even a single nutrient can stunt growth, reduce flowering and fruiting, and even affect yield.

Plants Need More Than Just NPK

Nitrogen (N), Phosphorus (P) and Potassium (K) are important, but they are only part of the nutrition story. Plants also require secondary nutrients and micronutrients in the right balance for healthy growth.

Essential nutrients

Nutrient Group	Main Role
Primary Nutrients (N, P, K)	Growth, root development and overall plant health
Secondary Nutrients (Ca, Mg, S)	Cell strength, chlorophyll formation and metabolism
Micronutrients	Support flowering, enzyme activity, fruit quality and plant immunity

Naati
Organics

What Happens When Nutrition is Imbalanced?

- Slow or stunted crop growth
- Yellowing or discoloured leaves
- Poor flowering and fruit set
- Weak root development
- Lower resistance to pests, diseases and environmental stress
- Reduced yield and quality

Balanced Nutrition = Better Results

When plants receive complete and balanced nutrition, they develop stronger roots, healthier foliage, improved flowering, better fruit quality and greater resilience. Balanced nutrition also improves the efficiency with which plants utilise available nutrients.

Did You Know?

A single teaspoon of healthy soil can contain billions of beneficial microorganisms working around the clock.

Farmer's Tip

Earthworms are one of the simplest indicators of a healthy soil. If you regularly find them in your field, your soil biology is usually improving.

Remember

Feed the soil first, and the soil will feed your crop.

Part - 05

Naati
Organics

The Naati Complete Crop Nutrition System

Healthy farming is not achieved by applying more fertilizer—it is achieved by nourishing the soil and the plant together. Naati Organics has therefore developed a simple two-product system that addresses both aspects of crop nutrition. One product strengthens the soil, while the other supports the growing plant.

The Naati Philosophy

Healthy Soil → Healthy Roots → Healthy Plants → Healthy Harvests

Instead of treating symptoms, the Naati System focuses on building a strong foundation for sustainable crop growth.

The Two-Product System

Product	Primary Role	Main Benefit
Naati Plus 	Soil Nutrition (Enriched Vermicompost)	Improves soil health, organic matter and root environment.
Naati Pro 	PlantNutrition (Bio-Activator)	Supports vigorous growth, nutrient utilisation and crop performance.

Naati
Organics

Why Two Products?

A healthy plant depends on healthy soil. While Naati Plus improves the soil ecosystem and root zone, Naati Pro complements it by supporting the nutritional needs of the growing crop. Together they form one complete crop nutrition system.

Key Benefits

- Supports long-term soil health.
- Encourages stronger root development.
- Promotes balanced crop nutrition.
- Suitable for a wide range of crops.
- Designed for season-after-season use.

Simple Application Sequence

Step 1

Apply Naati Plus to nourish the soil.

Step 2

Allow roots to establish in the improved root zone.

Step 3

Apply Naati Pro to support healthy crop growth.

Remember

Healthy crops are built from the soil upward. When soil and plant nutrition work together, better harvests follow.

Part – 06

Naati
Organics

Naati Plus – Soil Nutrition (Enriched Vermicompost)

Healthy crops begin with healthy soil. Naati Plus is an enriched vermicompost developed to improve the soil environment before the crop demands peak nutrition. Rather than acting as a conventional fertilizer, it helps rebuild soil health by increasing organic matter, improving soil structure and creating a favourable root zone.

What Makes Naati Plus Different?

Naati Plus Does...	Benefit to the Farmer
Improves soil structure	Better root penetration and aeration
Adds stable organic matter	Improves long-term soil fertility
Supports beneficial soil biology	Healthier, more active soil
Improves moisture retention	Better performance during dry spells
Creates a healthy root zone	Stronger crop establishment

Naati
Organics

Key Benefits

- Builds healthier soil season after season.
- Encourages stronger root development.
- Improves nutrient availability to plants.
- Supports efficient use of applied nutrients.
- Suitable for plantation, fruit, vegetable and field crops.

When Should It Be Applied?

Naati Plus is best applied during land preparation, at planting, or around the root zone before active crop growth. It prepares the soil so that roots can establish in a healthier environment.

Suitable Crops

Coconut

Arecanut

Black Pepper

Banana

Coffee

Mango

Pomegranate

Grapes

Vegetables

Spices

Field Crops

Did You Know?

Think of Naati Plus as an investment in your soil. The healthier your soil becomes, the better your crops can utilise water and nutrients.

Remember

Healthy soil is the foundation of every successful harvest. Naati Plus strengthens that foundation.

Part - 07

Naati Organics

Naati Pro – Plant Nutrition (Bio-Activator)

Once the soil has been nourished and healthy roots are established, the growing crop needs continuous support to achieve its full potential. Naati Pro is a bio-activator designed to complement Naati Plus by supporting balanced plant nutrition, efficient nutrient utilisation and vigorous crop growth.

Why Farmers Choose Naati Pro

- Supports vigorous vegetative growth.
- Promotes balanced plant nutrition.
- Encourages healthy flowering and fruit development.
- Helps crops utilise available nutrients efficiently.
- Complements the benefits created by Naati Plus.

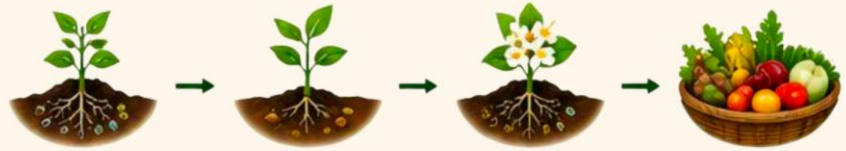

Where Can It Be Used?

Naati Pro is suitable for plantation crops, fruit crops, vegetables, spices and other cultivated crops as part of the Naati Complete Crop Nutrition System.

Naati
Organics

For best results

Naati Pro is available in both Balls and Powder formulations. Both serve the same purpose; farmers can choose the form that best suits their method of application.

Best Results

The best performance is achieved when Naati Pro is used together with Naati Plus. One improves the soil, while the other supports the crop. Together they provide a balanced approach to crop nutrition.

Farmer's Tip

Think of Naati Plus as preparing the foundation and Naati Pro as helping the crop make the best use of that healthy foundation.

Remember

Healthy soil and healthy plants work together. Naati Plus and Naati Pro are designed to do the same.

Part - 08

Naati Organics

Crop-wise Application Guide – Plantation Crops

Plantation crops remain in the field for many years and continuously draw nutrients from the soil. Maintaining healthy soil and balanced plant nutrition is therefore essential for sustained productivity. Using Naati Plus and Naati Pro together helps create a healthy root zone and supports vigorous crop growth.

Recommended Application Strategy

Crop	Naati Plus	Naati Pro	Best Time
 Coconut	 Apply around root zone	 Apply after soil application	Before monsoon / active growth
 recanut	 Apply around root zone	 Apply after soil application	Before monsoon / active growth
 Coffee	 Apply around drip line	 Apply during growth stage	Beginning of growth flush
 Black Pepper	 Apply around vine root zone	 Apply during active growth	Beginning of rainy season

Naati
Organics

General Guidelines

- Apply Naati Plus uniformly around the active root zone.
- Avoid placing the product directly against the stem or trunk.
- Light irrigation after application improves effectiveness.
- Use Naati Pro as recommended after the soil has been nourished.
- Repeat applications according to your crop management schedule.

Expected Benefits

Improvement	Benefit
Healthier soil	Better root environment
Stronger root system	Improved water and nutrient uptake
Balanced nutrition	Better flowering and fruit development
Healthier plants	Improved productivity over time

Important Note

Application quantities vary depending on crop age, spacing, soil type and local recommendations. Always follow the dosage chart supplied with the product or consult your Naati technical representative.

Part - 09

Naati Organics

Crop-wise Application Guide – Fruit Crops

Fruit crops require balanced nutrition throughout their growth cycle to support healthy vegetative growth, flowering, fruit development and consistent yields. Using Naati Plus and Naati Pro together helps maintain a healthy root environment and supports productive orchards season after season.

Recommended Application Strategy

Crop	Naati Plus	Naati Pro	Best Time
 Banana	 Apply around root zone	 Apply after soil application	At planting & active growth
 Mango	 Apply around drip line	 Apply during vegetative growth	Before flowering
 Grapes	 Apply around root zone	 Apply during active growth	After pruning / growth flush
 Guava / Sapota / Citrus	 Apply around root zone	 Apply after soil application	Before active growth

Naati
Organics

General Guidelines

- Apply Naati Plus evenly around the active feeder root zone.
- Incorporate lightly into the soil wherever possible.
- Provide light irrigation after application.
- Use Naati Pro after establishing a healthy soil environment.
- Follow crop-specific recommendations for repeated applications.

Expected Benefits

Healthy Crop Response	Benefit to the Farmer
Healthy root system	Improved nutrient and water uptake
Balanced plant nutrition	Better flowering and fruit set
Healthy canopy	Improved fruit quality
Improved soil condition	Sustained productivity over multiple seasons

Important Note

Application quantities should be decided based on crop age, canopy size, soil condition and local agronomic recommendations. Always refer to the official Naati dosage chart or consult your Naati technical representative.

Part - 10

Naati
Organics

Crop-wise Application Guide – Vegetables, Spices & Field Crops

🌿 Vegetables, spices and field crops grow rapidly and require timely nutrition throughout their growth cycle. Healthy soil, strong roots and balanced plant nutrition help improve crop vigour, flowering, produce quality and overall productivity. Using Naati Plus and Naati Pro together supports these crops from planting to harvest.

Recommended Application Strategy

Crop Group	Naati Plus	Naati Pro	Best Time
 Tomato / Brinjal / Chilli	 Mix into soil before or at planting	 Apply during vegetative growth	Planting & pre-flowering
 Onion / Garlic	 Incorporate into root zone	 Apply during active growth	At planting
 Turmeric / Ginger	 Apply during land preparation	 Apply during crop growth	Planting & early growth
 Leafy Vegetables	 Mix into beds before sowing	 Apply after establishment	Early growth
 Other Field Crops	 Apply during land preparation	 Apply during active growth	As per crop stage

Naati
Organics

General Good Practices

- Prepare a well-aerated soil before planting.
- Apply Naati Plus close to the active root zone.
- Irrigate lightly after application whenever possible.
- Use Naati Pro during the crop's active growth stage.
- Follow the recommended dosage chart for each crop.

Benefits

Crop Response	Farmer Benefit
Healthy root establishment	Better nutrient uptake
Balanced crop growth	Uniform crop stand
Improved flowering and produce quality	Better marketable yield
Healthier soil over time	Sustainable productivity

Important Note

Crop age, soil condition, irrigation method and local practices influence the quantity to be applied. Refer to the official Naati dosage chart for exact recommendations.

Part - 11

Naati
Organics

Farmer's Quick Use Guide

This section is designed to be a quick reference in the field. For detailed information, read the previous chapters. Here, the main points are summarized for easy recall.

Simple planting formula

Planting system – what to use when?

Step	What to do?	Product
1	Prepare the land/soil	Naughty Plus
2	Allow the roots to grow well	–
3	Support plant growth	Naughty Pro
4	Reuse as recommended if necessary.	Naughty Plus / Naughty Pro

Be careful.

- Follow the recommended dosage.
- Use the product on the active root area.
- Light irrigation and mulching are essential after application.
- Consider local soil and crop conditions.

Naati
Organics

Crop-wise quick guide

Crop group	Naughty Plus	Naughty Pro
Garden crops	Around the roots	After Naughty Plus
Fruit crops	Drip line / around roots	In the growth phase
Vegetable and spice crops	During planting	In active growth
Field crops	When preparing the land	As needed

Farmer's Tip

Mark this page in your farming diary or print it out and keep it in the field. The right nutrition at the right time is the first step to good yields.

Remember

Success in farming is not about big secrets...it's about consistently following small, correct steps.

Naati
Organics

Thank you

Thank you very much for reading this manual.

This manual is not just about introducing planting products. It is a small effort to convey the importance of healthy soil, strong roots, and balanced crop nutrition to every farmer.

If the soil in your field is healthy, your crop will be healthy. If your crop is healthy, your family and society will be healthy too.

The pledge of allegiance

- Making soil health a top priority.
- Providing scientific and practical solutions to farmers.
- Respecting nature and supporting sustainable agriculture.
- Respecting every farmer as our fellow traveler.

Naughty talk

"Save the soil... the soil will save you. Healthy soil is the true wealth of a farmer. Investing in soil today is a valuable legacy for tomorrow's generations. **"Naati Organics"** will always be with you on your farming journey.
